ALA : - ALA 1

1. Incorrect i increment placement

Error Line:

i = i + 1   # ❌ Galat jagah

Correct Line:

   i = i + 1

Explanation:
The increment of i must be **inside the while loop**, otherwise the loop becomes infinite because i never increases.

---

2. Missing colon in if statement

Error Line:

if total_stock > 500   # ❌ : missing

Correct Line:

if total_stock > 500:

Explanation:
Python requires a colon : at the end of if statements. Without it, you'll get a SyntaxError.

---

3. Improper loop indentation

Error Line:

```
while i < products:
   stock = int(input("Enter stock quantity: "))
   total_stock = total_stock + stock
```

```python
    if stock < 10:
        print("Low stock")
    else:
        print("Sufficient stock")

i = i + 1   # ❌
```

Correct Lines:

```python
while i < products:
    stock = int(input("Enter stock quantity: "))
    total_stock = total_stock + stock

    if stock < 10:
        print("Low stock")
    else:
        print("Sufficient stock")

    i = i + 1
```
